

Marlow Explorer 53E

Quality, Versatility, Performance, Value

The Marlow 53 can be built to do the loop at 10 knots or powered to cruise at 20 knots. All the quality and value you have come to expect from Marlow in a 53' Yacht.

"Our advanced manufacturing techniques and over a decade of experience of building Marlow Explorers from 53' to 100' has provided us the ability to offer a 53' model that is going to revolutionize the industry." - **David Marlow**

Why compromise when you can have everything you want? The Marlow 53 gives you better range than a slow trawler while providing very fast passage making capabilities; with the ability to do 18+ knots with optional power for over 400 miles. All this capability while still offering you the flexibility to build the layout that suits your cruising style and personal tastes. Our own state of the art factory and proprietary manufacturing techniques let us provide this at a lower cost than yachts far below our class.

Marlow 53
